ONRAMP BUSINESS

Onramp Business delivers institutional-grade Bitcoin custody and financial infrastructure for corporate treasuries. Secure, auditable, and built for board-level oversight.

BEST-IN-CLASS CORPORATE BITCOIN STRATEGY

Multi-Institution Custody: The Foundation of Bitcoin Security

Custody is the foundation. Without secure custody, a corporate Bitcoin strategy cannot scale or survive.

Most corporate Bitcoin failures stem from weak custody. Onramp eliminates single points of failure by securing assets across multiple independent institutions. Your treasury remains in your control, visible on-chain, and resilient against custodian compromise.

Enterprise Controls Built for Business

Bring boardroom-level governance to your Bitcoin operations with:

- **ROLE BASED PERMISSIONS** to define access by function
- **APPROVALS ON WITHDRAWALS** (custom rules coming soon)
- **VIEW-ONLY ACCESS** for finance, compliance, and auditors
- **24/7 CRYPTOGRAPHIC PROOF OF RESERVES** no more trust in balance-sheet statements

Custody Insurance

Onramp's custody insurance through Canopius, a Lloyd's of London syndicate, does not currently include the Tetra key quorum. Businesses that want coverage in their own name can request it during onboarding, placed through our broker, Native, with a dedicated limit and subject to insurer approval.

Institutional-Grade Liquidity and Trading

Access deep, institutional liquidity at competitive rates, then move your bitcoin into your Multi-Institution Custody vault.

Continuity, Compliance, and Confidence

Your Bitcoin treasury should outlive any single individual or vendor. With Onramp, your bitcoin stays verifiable on-chain and recoverable, supporting business continuity, regulatory transparency, and long-term security for your balance sheet.

WHAT IS MIC?

A dedicated vault for each client, protected by Onramp, Tetra Trust, and CoinCover. It takes two of three institutions to move your bitcoin, and nothing moves without your company's authorization.

WHY IT MATTERS

Removes single-custodian failure risk, clarifies legal title, and produces audit-ready evidence of ownership and control.

WHO USES MIC?

- **FAMILY OFFICES & PRIVATE CLIENTS:** Cold-storage strength with clean succession planning.
- **ENDOWMENTS & FOUNDATIONS:** Long-horizon capital with verifiable ownership.
- **CORPORATE TREASURY:** Reserve assets with board-friendly governance and continuity.
- **FIDUCIARIES / RIAs / TRUSTEES:** Control without concentration and clear role separation.

WHY MIC OVER OTHER OPTIONS?

- **SINGLE CUSTODIAN:** One point of failure vs distributed control.
- **OMNIBUS POOLS:** Blurred ownership vs client-titled vaults on-chain.
- **ATTESTATIONS ("PROOF OF RESERVES"):** Snapshots vs continuous proof of ownership and control.
- **PROXIES (ETFs/EQUITIES):** Price exposure vs native assurance.
